

A multifunctional steam treatment device

Figures

Fig 1

FIG. 1: Shows a mixer comprising: frame (1), mixer blades connected to a shaft (2), shaft (3), bearing (4), hollow drum (5), lockable outlet (6), pulley wheel (7), bearing (8), chain (9), crank (10), peddle (11), and air circulation openings (12).

Fig. 2

FIG. 2: Shows a shaft mechanically connected to mixer blades at 60° it comprises: aeration (1) openings, mixer blade (2), shaft (3), and lockable inlet/outlet opening (4).

FIG. 3: Shows a picture sample of a fabricated mixer.

Fig. 4

FIG. 4: Shows a multifunctional steam treatment device comprising: mains (1), bimetallic strip (2), inlet tap (3), steam chamber (hollow drum) (4), pressure outlet (5), steam pipe (6), removable cover (7), high pressure steam outlets (8), treatment chamber (9), outlet tap (10), heat resistant wall (11), heater (12), frame (13), biogas burners (14), biogas tap (15), desulfurizer (16), biogas reactor pressure valves (17), wheels that make the biogas plant portable (18), tap that allows cleaning of biogas reactor (19), pipes used to feed the biogas reactor chambers (20), valve that release excess digestion materials (21), pressure gauge connected to pressure valves (22), green house cover material to enclose biogas reactors (23), entry point of digestion materials (24).

Fig. 5

FIG. 5: Shows a picture sample of a fabricated steam treatment device.
