

Sikizwa Voice 360 / Sikizwa Care - Minimum Server Requirements

For the Sikizwa Voice 360 / Sikizwa Care platform, which consists of a Flutter mobile application, Node.js API backend, MongoDB database, Redis cache, Socket.IO real-time communication, and an administrative dashboard, the minimum virtual Ubuntu server (VPS) requirements are:

- 2 vCPUs
- 4 GB RAM
- 40 GB SSD Storage

This configuration is suitable for development, testing, pilot deployments, and small-scale production environments with a limited number of concurrent users.
